

16. January 2009

Company profile

Foundation / Office

The Generative Software private limited company was founded January 18th 2007 by the certified mathematician Marcus Munzert and the qualified engineer Heinz Rohmer. We focus on methods of model-driven software development. Our goal is to enhance the productivity of software development and to achieve better maintainability of the generated software. The company is based in Freiburg (im Breisgau).

Team / Competences

We have many years of experience in software development and deployment as well as project management in national and international projects. Our clients profit from our extensive knowledge of different technologies, programming languages and architectures.

Business field

The Generative Software private limited company has the answer to the question on how to improve the quality of software and make it less expensive:

By applying model-driven development approaches in a useful and consistent way, you will achieve:

- faster and low-cost development
- high and steady quality
- better maintainability

Software developers will be able to concentrate on what the software is supposed to do as opposed to figuring out how to do it.

Training – This, we cannot automatize

With help and advice in generative development approaches we support users and interested parties. With our individual training programs you will achieve your goal even faster.

<http://www.generative-academy.com>

JenerateIT – The basis of automation

Our generation tool JenerateIT allows the development of generation logic and the supervision of the generation process. At the same time, we ensure that architects and developers are able to work as convenient and flexible as possible.

Industry focus

Inexpensive and excellent software is an issue in every industry. Software producers are asked to deliver it, end-user demand it. We can help both groups. Software producers apply our tools to make their clients happy. End-user benefit from the high productivity we achieve by producing custom-generated software.
